

Activity # 4: Flowgorithm Exercises Discussion

M1: Adding Two Numbers

Function Main

Declare Integer Num1

Declare Integer Num2

Declare Integer Sum

Declare Boolean answer

Assign answer = True

Declare String Again

Output "Welcome to this program which adds two numbers!"

While answer == True

Output "Enter the first number."

Input Num1

Output "Enter Second number"

Input Num2

Assign Sum = Num1 + Num2

Output "The Sum is:" & Sum

Output "Would you like to try again?"

Input Again

If Again == "yes"

Output "Okay. If that's what you want!"

False:

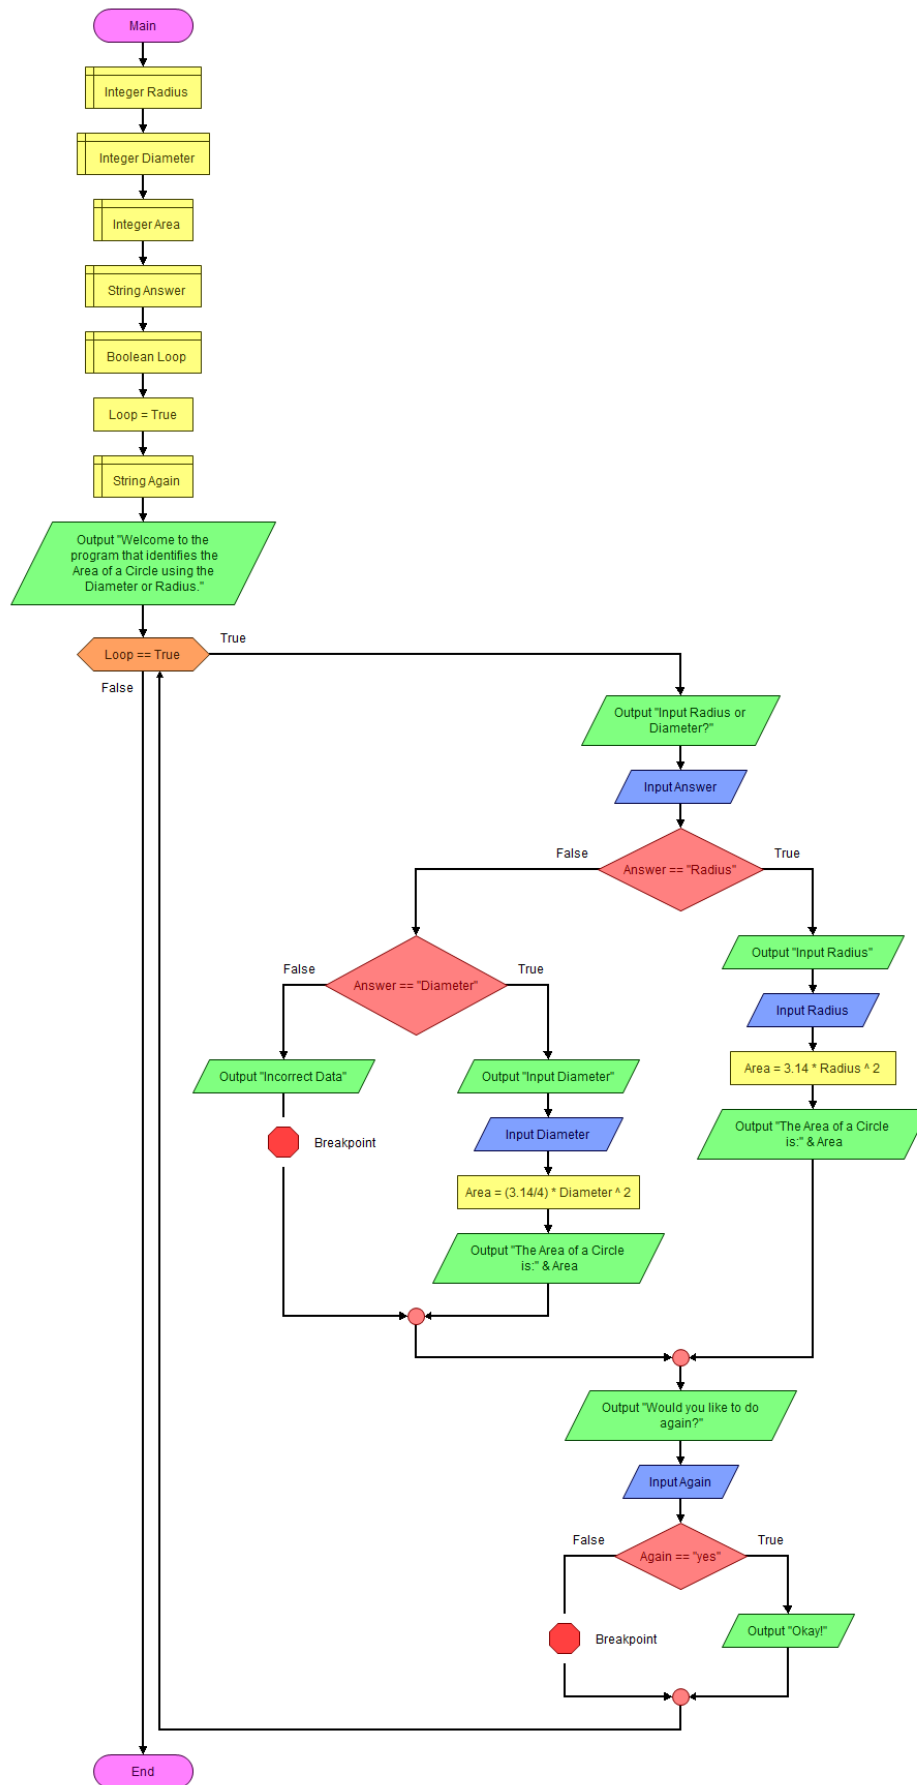

Output "Okay. Thank you!"

End

End

End

M2: Getting the Area of a Circle using Diameter or Radius

Function Main

Declare Integer Radius

Declare Integer Diameter

Declare Integer Area

Declare String Answer

Declare Boolean Loop

Assign Loop = True

Declare String Again

Output "Welcome to the program that identifies the Area of a Circle using the Diameter or Radius."

While Loop == True

Output "Input Radius or Diameter?"

Input Answer

If Answer == "Radius"

Output "Input Radius"

Input Radius

*Assign Area = 3.14 * Radius ^ 2*

Output "The Area of a Circle is:" & Area

False:

If Answer == "Diameter"

Output "Input Diameter"

Input Diameter

*Assign Area = (3.14/4) * Diameter ^ 2*

Output "The Area of a Circle is:" & Area

False:

Output "Incorrect Data"

End

End

Output "Would you like to do again?"

Input Again

If Again == "yes"

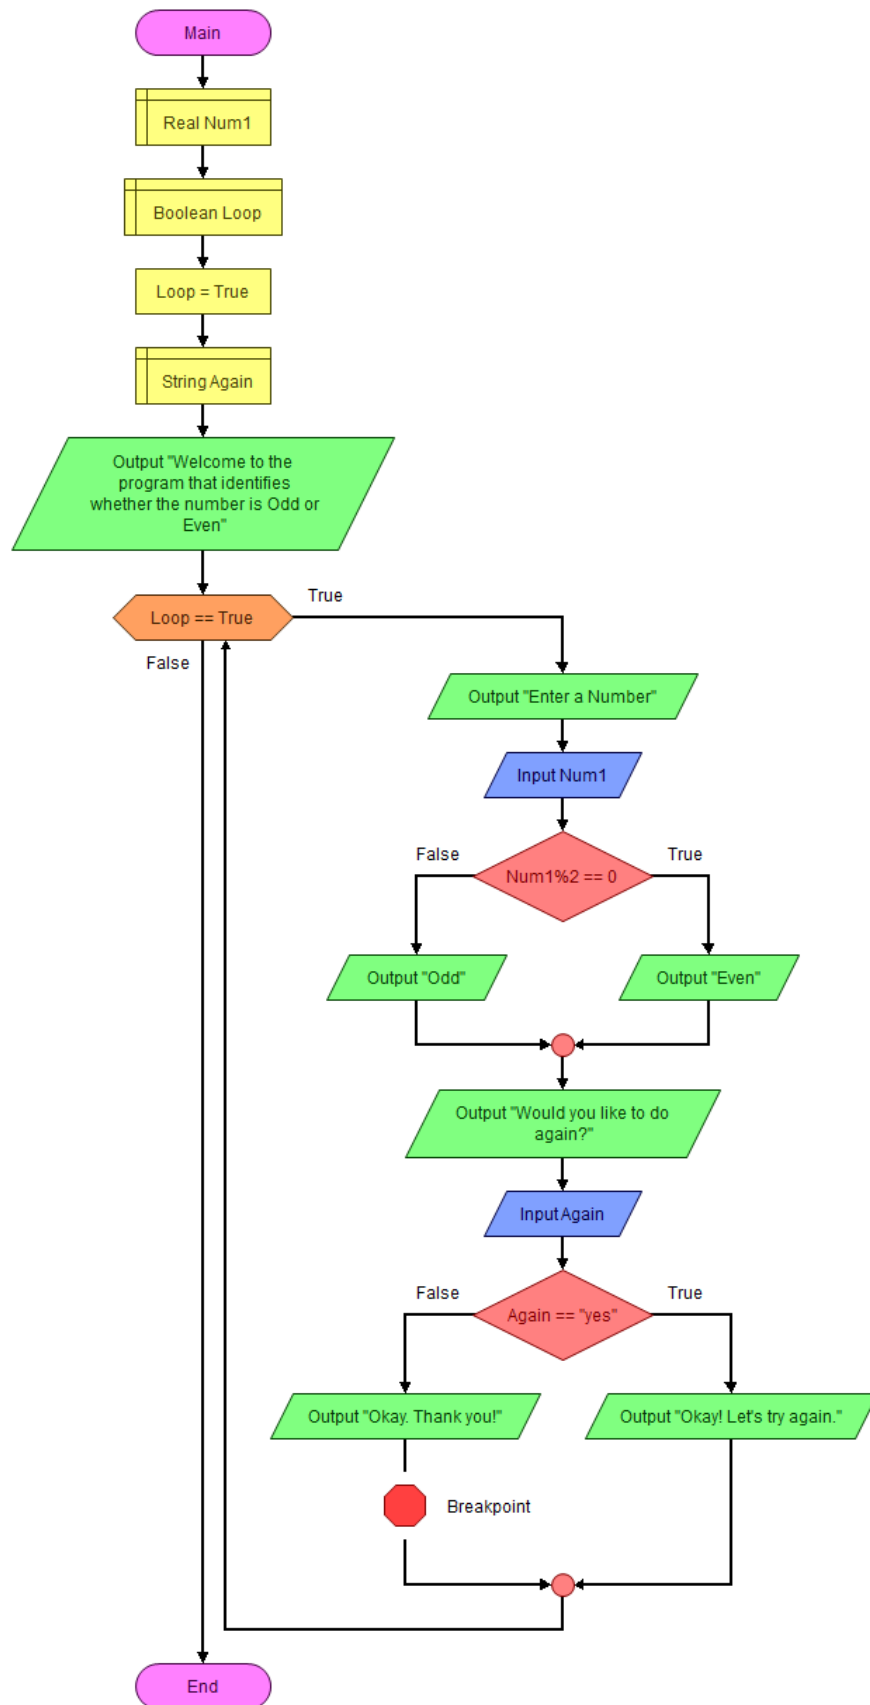

Output "Okay!"

False:

End

End

M3: Odd and Even Number Identifier

Function Main

Declare Real Num1

Declare Boolean Loop

Assign Loop = True

Declare String Again

Output "Welcome to the program that identifies whether the number is Odd or Even"

While Loop == True

Output "Enter a Number"

Input Num1

If Num1%2 == 0

Output "Even"

False:

Output "Odd"

End

Output "Would you like to do again?"

Input Again

If Again == "yes"

Output "Okay! Let's try again."

False:

Output "Okay. Thank you!"

End

End

End
